

MX Logic®

Why a Managed Service is the Best Defense for Your Business

Spam now accounts for more than 85% of all email traffic.

MX LOGIC® THREAT CENTER

93% of organizations have had a virus, worm or Trojan Horse successfully infiltrate their network through email.

OSTERMAN RESEARCH, INC.

With the growing volume of online threats, including spam, spyware and viruses, businesses that implement a managed email defense service are benefiting from greater overall online security and a reduction in costs.

Both the MX Logic® Email Defense Service and MX LogicSM Web Defense Service block threats at the network perimeter before they can enter and harm the corporate network. The robust managed services are more accurate, easier to implement, more cost-effective to maintain, and have a greater return on investment than software and server/gateway appliances. The powerful email security solution meets the needs of businesses that require enterprise-grade service reliability and performance, without enterprise-level complexity and cost.

REDUCE COSTS THROUGH EASE OF INTEGRATION, ADMINISTRATION AND USE

An important consideration when reviewing online security options is the cost savings that result from using a service versus a software solution or appliance. By operating outside the corporate firewall, the MX Logic services help to reduce bandwidth usage, computer maintenance and downtime, and other IT-related costs. By deploying a perimeter-based service, organizations benefit from savings in the following areas:

- **No hardware or software integration required**
- **No out-of-pocket maintenance fees**
- **No operating system licenses for hardware platforms required**
- **No need to manage operating system (patches, updates)**
- **No updates to software licenses or subscription to anti-spam server software required**
- **No support contracts for server software required**
- **No need to apply server version updates or patches**
- **No need to apply/change server policies and rules**
- **Significantly reduce storage and bandwidth costs**
- **Improve employee and IT administrator productivity**

BLOCK EMAIL THREATS BEFORE THEY CAN HARM YOUR INTERNAL NETWORK

MX Logic managed services are designed to remove threats from your email and Web traffic at the network perimeter before they can pass through the enterprise firewall and compromise your users and network. Because server/gateway appliances and software all filter within the firewall, these solutions cannot offer the same level of network protection.

KEY BENEFITS

- Block email threats before they can harm your internal network
- Significantly reduce bandwidth and storage costs
- Around-the-clock monitoring and protection
- Rapid, automatic updates
- Effective group policies management
- No hardware or software required
- Free up IT resources
- Increase employee productivity
- Simple, effortless activation

REDUCE IT STAFF BURDEN

Businesses are quickly realizing that implementing managed online security services greatly reduces the time IT managers and staff must spend handling spam and monitoring Web threat activity. With MX Logic's service, the threat management burden is virtually eliminated because there is no need to install and configure additional servers or regularly load software upgrades and patches to stay current and protected against the latest threats. A business only needs to redirect its email and/or Web traffic to MX Logic and fine-tune its filtering policies through the MX Control Console, our intuitive Web-based configuration and reporting tool. After the customer's account is set-up, MX Logic provides around-the-clock protection with virtually no IT intervention required.

AROUND-THE-CLOCK THREAT MONITORING AND PROTECTION

With limited IT staffs to devote to threat management, businesses benefit from MX Logic's team of threat specialists, who monitor the global state of online threats around-the-clock, while and providing real-time updates. Unlike software products or appliances, MX Logic services are supported by a dynamic defense strategy that continuously incorporates the latest email and Web threat information into its database and rewrites its filtering rules to protect against these threats.

THE RIGHT SOLUTION FOR YOUR BUSINESS

The MX Logic Email Defense Service and MX Logic Web Defense Service provide greater online protection and security at a lower cost than on-premises solutions like software or appliances. In our commitment to provide the most accurate and effective email and Web security, MX Logic offers real-time upgrades and maintenance – proactively adding the right protection at the right time. The services require minimal administration and can be activated rapidly and seamlessly. For businesses looking to make online security virtually effortless and hassle-free, a service from MX Logic is the best defense.

Find out how you can leave the management of your online security solutions to us and enjoy a safer, more secure network and business environment by calling 1.877.MXLOGIC or visiting us at www.mxlogic.com.
